M Ali

Software Engineering Graduate | Python, Backend & Data

+44 7552 126113 | aliskepss@gmail.com | github.com/skeptre | aliskeps.com

Education

Manchester Metropolitan University — Manchester, United Kingdom
BSc in Software Engineering — *Sep 2023 – May 2026*

Technical Skills

Languages: Python, SQL, JavaScript, Java
Backend: FastAPI, REST APIs, SQLAlchemy, JWT authentication, Pydantic, Alembic
Data: PostgreSQL, Pandas, Prefect, ELT pipelines, data validation, SQL transformations
Development: Git, Docker Compose, pytest, GitHub Actions, Ruff; HTML/CSS, Shopify, Liquid

Selected Engineering Projects

Retail & Operations Intelligence Platform — GitHub
Python, PostgreSQL, Prefect, FastAPI, Docker Compose

- Built a batch ELT platform for 50,000 synthetic retail transactions, transforming raw data through bronze, silver and gold PostgreSQL schemas into sales and inventory analytics.
- Implemented SQL conflict handling, invalid-record quarantine, ingestion retries and data-quality checks; orchestrated stages with Prefect and recorded pipeline status and failures.
- Exposed six FastAPI endpoints, configured PostgreSQL and pgAdmin with Docker Compose, and added 20 pytest tests plus GitHub Actions checks for linting and testing.

Ticket Management API — GitHub
Python, FastAPI, SQLAlchemy, Pydantic, Alembic, JWT, pytest

- Built a REST API with user registration, JWT authentication and ticket CRUD operations, restricting ticket access to the authenticated owner.
- Modelled users and tickets with SQLAlchemy, managed schema changes with Alembic, and tested authentication, validation and ticket workflows using an isolated SQLite database.

LLM Benchmarking for Financial Sentiment Analysis — Case study
Final-year project | Python, Pandas, scikit-learn, OpenAI and Gemini APIs

- Built an evaluation pipeline comparing GPT-4o and Gemini 2.5 Flash using Financial PhraseBank and FiQA data, with standardised prompts, response validation and label normalisation.
- Evaluated 51 sentiment samples using accuracy, macro F1, confusion matrices, request latency and McNemar's test; documented results and limitations.

Experience

Freelance Shopify Developer — Sep 2026 – Present
Small Business Clients — *Remote*

- Built and customised Shopify storefronts using Liquid, HTML/CSS and JavaScript, translating client requirements into responsive product pages, navigation and store features.
- Worked directly with business owners on mobile usability, delivery information and launch readiness; configured product collections and SEO metadata.

Application Support Engineer — Apr 2025 – Sep 2025
Claris, Apple subsidiary — *Remote*

- Investigated FileMaker application defects across scripts, business logic, data handling and REST/JSON integrations to identify root causes.
- Produced reproducible issue reports and collaborated with engineering teams to investigate application and automation failures.
