EDUCATION

BSc in Software Engineering

Manchester Metropolitan University

09/2023 – 05/2026

Manchester

SKILLS

- **Languages:** Python, Java, JavaScript, SQL
- **Core Concepts:** Object-Oriented Programming, Debugging, Problem Solving, SDLC
- **Backend & APIs:** RESTful APIs, JSON, API Integration
- **Tools:** Git, GitHub, Postman, Docker (containerisation)
- **Additional Exposure:** Cloud Computing AWS, Software Testing, Agile Scrum.

PROJECTS

AI Triage & Automation Engine (Python & REST API)

- Built a Python-based automation system to analyse incoming requests and assign priority based on predefined rules and AI-generated responses
- Integrated Gemini API to process input data and generate structured outputs for classification.
- Implemented webhook-based routing to forward high-priority events to a monitoring endpoint.
- Developed a lightweight frontend to fetch and display real-time JSON data from API endpoints

Support Ticket API (Python, FastAPI, SQLAlchemy, Alembic, JWT, Docker, pytest)

- Built a backend API for support ticket management with user registration/login, JWT-based authentication, ticket CRUD endpoints, and ownership-based access control.
- Added relational database persistence, Alembic migrations, automated API tests, and a Dockerised local setup to support a production-style development workflow.

LLM Benchmarking Framework for Financial Sentiment Analysis (Python, APIs, Data Analysis)

- Built an automated evaluation pipeline to benchmark large language models (e.g. GPT-4o, Gemini) on financial sentiment classification tasks
- Designed data processing and inference workflows to standardise model outputs across multiple APIs
- Implemented evaluation metrics including accuracy, macro F1-score, and latency tracking for comparative analysis
- Generated structured reports and visualisations to analyse model performance on domain-specific datasets
- Optimised API usage and testing workflow to reduce failed calls and improve cost efficiency

PROFESSIONAL EXPERIENCE

Application Support Engineer

Claris - Apple subsidiary - Student role alongside degree

04/2025 – 12/2025

Remote

- Troubleshoot low-code business application workflows in FileMaker, investigating issues across scripts, layouts, data handling, and API-connected processes
- Analysed and troubleshoot application-level issues across cloud, server, and client environments

- Performed root-cause analysis on bugs involving business logic, data handling, and API integrations
- Debugged workflows and automation processes using JSON and REST-based services
- Investigated system behaviour across distributed components to identify failure points
- Collaborated with engineering teams by providing detailed issue reports and reproduction steps
- Worked with JSON data structures and API-driven workflows to diagnose integration issues

LANGUAGES

- English (Fluent)
- Italian (Fluent)
